

# Akaunting

[Link](#)

```
version: '3.3'
services:
  docker-akaunting:
    container_name: akaunting
    restart: unless-stopped
    ports:
      - '4587:8080'
    volumes:
      - '/srv/path/Files/Akaunting/mysql:/var/lib/mysql'
      - '/srv/path/Files/Akaunting/logs:/var/log'
      - '/srv/path/Files/Akaunting/config:/var/www/akaunting/config'
    environment:
      - 'MYSQL_ROOT_PASSWORD=xxxxxxx' # Must be at least 8 char + 1cap + 1num + 1
special
  image: 'kuralabs/docker-akaunting:latest'
```

Go to container logs and wait for the installation to finish. Then finish database setup with given credentials.
