

Bloben

[Link](#)

1. Files

Clone this repository <https://github.com/nibdo/bloben-app>

```
git clone https://github.com/nibdo/bloben-app.git
```

2. Secrets

Copy .env.example file to .env file. You will need to change secrets for database, session, two-factor authentication and initial admin password. Setup also app domain env APP_DOMAIN to your domain.

```
INITIAL_ADMIN_PASSWORD=yourInitialLoginPasswordForAdmin
DB_PASSWORD=someDbPassword
POSTGRES_PASSWORD=someDbPassword
SESSION_SECRET=xxxx
OTP_SECRET=xxxx
APP_DOMAIN=yourDomain
ENCRYPTION_PASSWORD=optionalPasswordForEncryptingEmailConfigs
```

3. Edit docker-compose-pg14.yml

There is already a `docker-compose.yml` in the folder, so rename it or get rid of it. Then:

```
cp docker-compose-pg14.yml docker-compose.yml
nano docker-compose.yml
```

4. Start server

Run file docker-compose.yml

```
docker-compose -f docker-compose.yml up -d
```
