

# I Hate Money

[Github](#)

*I hate money* is a web application made to ease shared budget management. It keeps track of who bought what, when, and for whom; and helps to settle the bills.

```
version: "3.3"
services:
  ihatemoney:
    ports:
      - 8293:8000 # OG 8000:8000
    volumes:
      - /srv/path/Ihatemoney/database:/database
    environment:
      - SESSION_COOKIE_SECURE=False # set to true if running over https
      - ACTIVATE_DEMO_PROJECT=False
      - ALLOW_PUBLIC_PROJECT_CREATION= False
      - BABEL_DEFAULT_TIMEZONE=Europe/Paris
      - ACTIVATE_ADMIN_DASHBOARD=True
      - ADMIN_PASSWORD=pbkdf2:sha256:6000000$xxxxxxx # in the case of a docker-compose like
here BE SURE to ADD a $ after '6000000$'
    image: ihatemoney/ihatemoney
    restart: unless-stopped
```

To enable the Admin dashboard, first generate a hashed password with:

```
docker run -it --rm --entrypoint ihatemoney ihatemoney/ihatemoney generate_password_hash
```

Copy paste the hashed password adding a `$` as indicated in the comment in the docker-compose

If you get `CSRF Token: The CSRF tokens do not match.` you're accessing the platform through plain HTTP so you need to disable secure cookies:

<https://ihatemoney.readthedocs.io/en/latest/configuration.html#session-cookie-secure>

Or just use a domain with HTTPS.
