

Ladder

[Link](#)

Ladder is a web proxy to help bypass paywalls. This is a selfhosted version of [1ft.io](#) and [12ft.io](#). It is inspired by [13ft](#).

```
version: '3'
services:
  ladder:
    image: ghcr.io/kubero-dev/ladder:latest
    container_name: ladder
    build: .
    #restart: always
    #command: sh -c ./ladder
    environment:
      - PORT=8080
      #- PREFORK=true
      #- X_FORWARDED_FOR=66.249.66.1
      #- USER_AGENT=Mozilla/5.0 (compatible; Googlebot/2.1; +http://www.google.com/bot.html)
      #- USERPASS=foo:bar
      #- LOG_URLS=true
      #- GODEBUG=netdns=go
    ports:
      - "8080:8080"
    deploy:
      resources:
        limits:
          cpus: "0.50"
          memory: 512M
        reservations:
          cpus: "0.25"
          memory: 128M
```
