

Nextcloud All-In-One

[Link](#) | [Tutorial](#)

```
version: "3.8"

volumes:
  nextcloud_aio_mastercontainer:
    name: nextcloud_aio_mastercontainer
services:
  nextcloud:
    image: nextcloud/all-in-one:latest
    restart: unless-stopped
    container_name: nextcloud-aio-mastercontainer
    volumes:
      - nextcloud_aio_mastercontainer:/mnt/docker-aio-config
      - /var/run/docker.sock:/var/run/docker.sock:ro
    ports:
      - 8145:8080 # change the port on the left side if it's already in use on your host
system.
    environment:
      - NEXTCLOUD_DATADIR=/srv/.../Nextcloud/
      - NEXTCLOUD_UPLOAD_LIMIT=500G #default 10G
      - NEXTCLOUD_MAX_TIME=360000 #default 3600
      - NEXTCLOUD_MEMORY_LIMIT=2048M #default 512
      - APACHE_PORT=11000 # change this port number if 11000 is already in use on your host
system.
```

[*How to change the default location of Nextcloud's Datadir](#)

Go to your registrar and create a CName. Let's say `ncaio.domain.ltd`.

Create a proxy with this cname pointing to `<your host machine IP>:11000`

Nginx proxy manager must point to host machine and port 11000

Then go to `https://<your host machine IP>:8080` (or the port you changed 8080 to in the compose file). Accept the risk.

Copy the very long password.

On the next page, paste the very long password.

On the next page, type in the domain into the input field that will be used for Nextcloud. Here it is `ncaio.domain.ltd`

Select or unselect addons and fill in your timezone.

Then "Download and start containers. This will take a while. You can hit the reload button to check out how it's going.

BE PATIENT! The next part will take anywhere from 5 to 25 or 30 minutes.

Now, we wait. In the background, the Nextcloud Master Container is pulling down all of the images for each of the Nextcloud modules that will run.

Once you see the message that all containers are in a 'Running' state, you'll get a button to Open Nextcloud, and you'll be provided a username (usually admin) and a randomly generated, long strong password for your initial login. Make sure to copy that password and use it to login to your Nextcloud install the first time.

Nextclouds config.php file is stored in the nextcloud_aio_nextcloud Docker volume and can be edited by following the [config.php documentation](#).

You can run Nextcloud's usual occ commands by following the [occ documentation](#).

Nextcloud's datadir is getting stored in the /srv/.../Nextcloud/ directory. See the [NEXTCLOUD_DATADIR documentation](#) on how to change this.

The Nextcloud container is confied and local external storage in Nextcloud is disabled. See the [NEXTCLOUD_MOUNT documentation](#) on how to change this.

Nextcloud has an upload limit of 10G configured (for public link uploads. Bigger uploads are always possible when users are logged in). See the [NEXTCLOUD_UPLOAD_LIMIT documentation](#) on how to change this.

For Nextcloud, a memory limit of 512M per PHP process is configured. See the [NEXTCLOUD_MEMORY_LIMIT documentation](#) on how to change this.

Nextcloud has a timeout of 3600 seconds configured (important for big file uploads). See the [NEXTCLOUD_MAX_TIME documentation](#) on how to change this.

The /dev/dri device which is needed for hardware transcoding is not attached to the Nextcloud container. See the [NEXTCLOUD_ENABLE_DRI_DEVICE documentation](#) on how to

change this.

For further documentation on AIO, refer to [this page](#). You can use the browser search [CTRL]+[F] to search through the documentation. Additional documentation can be found [here](#).

Lost setup password ?

```
sudo cat  
/var/lib/docker/volumes/nextcloud_aio_mastercontainer/_data/data/configuration.json | grep  
password
```

Between two installs, don't forget to ERASE DOCKER VOLUMES

Commonly used addons:

Cospend

Polls

Camera RAW Previews

App order

Breeze dark
