

# Export Docker Container Settings as Docker Compose Stack

You can use this tool from a docker container by either cloning this repo and building the image or using the [automatically generated image on GitHub](#)

Pull the image from GitHub (supports both x86 and ARM)

```
docker pull ghcr.io/red5d/docker-autocompose:latest
```

Use the new image to generate a docker-compose file from a running container or a list of space-separated container names or ids:

```
docker run --rm -v /var/run/docker.sock:/var/run/docker.sock ghcr.io/red5d/docker-autocompose  
<container-name-or-id> <additional-names-or-ids>...
```

To print out all containers in a docker-compose format:

```
docker run --rm -v /var/run/docker.sock:/var/run/docker.sock ghcr.io/red5d/docker-autocompose  
$(docker ps -aq)
```
